

Find the resulting images of the following. Assume all rotations are clockwise, unless stated otherwise.

1. The point  $(3, -2)$  is rotated  $90^\circ$  about the origin and then dilated by a scale factor of 4. What are the coordinates of the resulting image?

$$90^\circ \rightarrow (-2, -3)$$

$$\text{Dil } 4 \rightarrow \boxed{(-8, -12)}$$

2. What is the image of point  $(4, 2)$  after the composition of transformations by rotating  $90^\circ$  and then reflecting the image about the  $y = x$  line?

$$90^\circ \rightarrow (2, -4)$$

$$y=x \rightarrow \boxed{(-4, 2)}$$

3. What is the image of point  $(1, 1)$  under the transformation of reflecting about the  $x$ -axis and then rotating  $90^\circ$  and then dilated by a scale factor of 3?

$$x\text{-axis} \rightarrow (1, -1)$$

$$90^\circ \rightarrow (-1, -1)$$

$$\text{Dil } 3 \rightarrow \boxed{(-3, -3)}$$

4. What are the coordinates of point  $A'$ , the image of point  $A(-4, 1)$  after the composition transformation of rotating  $270^\circ$  counter-clockwise and reflecting about the  $y = x$  line where the origin is the center of rotation?

$$270^\circ \text{ CC} \rightarrow (1, 4)$$

$$y=x \rightarrow \boxed{(4, 1)}$$

5. The coordinates of  $\triangle JRB$  are  $J(1, -2)$ ,  $R(-3, 6)$  and  $B(4, 5)$ . What are the coordinates of the vertices of its image after the transformation of a translation  $(x + 2, y - 1)$  and then a reflection about the  $y$ -axis?

$$(x+2, y-1) \rightarrow (3, -3) (-1, 5) (6, 4)$$

$$y\text{-axis} \rightarrow \boxed{(-3, -3) (1, 5), (-6, 4)}$$

6. If the coordinates of point  $P$  are  $(2, -3)$ , then what is the resulting image after rotating the point  $180^\circ$  and then rotating it again  $90^\circ$ ?

$$180^\circ \rightarrow (-2, 3)$$

$$90^\circ \rightarrow \boxed{(3, 2)}$$

7. Find the coordinates of reflection about the  $y$ -axis and then reflecting about the  $y = x$  line if the coordinates of the original point are  $(6, 1)$ .

$$y\text{-axis} \rightarrow (-6, 1)$$

$$y=x \rightarrow \boxed{(1, -6)}$$

8. Find the coordinate of the image of  $(2, 4)$  under the transformation of a reflection about the  $y$ -axis and then a translation of the figure using  $(x + 3, y - 5)$ .

$$y\text{-axis} \rightarrow (-2, 4)$$

$$(x+3, y-5) \rightarrow \boxed{(1, -1)}$$

9. What is the image that results from the composition of transformation of reflecting about the x-axis and then rotating  $90^\circ$  counter-clockwise the point  $(-3, 0)$ ?

$$\begin{aligned} & \text{x-axis } (-3, 0) \\ & 90^\circ \text{ CC } \boxed{(0, -3)} \end{aligned}$$

10. Find the coordinates of point  $N(-1, 3)$  under the composition of reflecting about the y-axis and then rotating  $90^\circ$ .

$$\begin{aligned} & \text{y-axis } (1, 3) \\ & 90^\circ \boxed{(3, -1)} \end{aligned}$$

11. If the coordinates of A are  $(2, -3)$ , what are the coordinates of  $A'$ , the image of A after a rotation of  $270^\circ$  counter-clockwise and then a reflection about the y-axis?

$$\begin{aligned} & 270^\circ \text{ CC } (-3, -2) \\ & \text{y-axis } \boxed{(3, -2)} \end{aligned}$$

12. If the coordinates of B are  $(1, -5)$ , what are the coordinates of  $B'$ , the image of B after a rotation of  $90^\circ$  and then a reflection about x-axis, and then a rotation of  $180^\circ$ ?

$$\begin{aligned} & 90^\circ \rightarrow (-5, -1) \\ & \text{x-axis } (-5, 1) \\ & 180^\circ \rightarrow \boxed{(5, -1)} \end{aligned}$$

13. Find the image of point  $A(3, -2)$  under the composition of translations  $(x+2, y+1)$  and then  $(x-6, y-4)$  and then a reflection about the origin.

$$\begin{aligned} & (x+2, y+1) \rightarrow (5, -1) \\ & (x-6, y-4) \rightarrow (-1, -5) \\ & \text{about origin } \boxed{(1, 5)} \end{aligned}$$

14. What coordinate would result if the beginning point is  $(3, 2)$  if there was a reflection about the y-axis and then a  $180^\circ$  rotation?

$$\begin{aligned} & \text{y-axis } \rightarrow (-3, 2) \\ & (-x, -y) \quad 180^\circ \rightarrow \boxed{(3, -2)} \end{aligned}$$

15. Write a single translation that is equivalent to the transformation  $(x+3, y-1)$  followed by  $(x-5, x+5)$ .

$$(x-2, y+4)$$
