Reading to Learn Mathematics***Proving Segment Relationships*****Pre-Activity How can segment relationships be used for travel?**

Read the introduction to Lesson 2-7 at the top of page 101 in your textbook.

- What is the total distance that the plane will fly to get from San Diego to Dallas? *1430 mi*
- Before leaving home, a passenger used a road atlas to determine that the distance between San Diego and Dallas is about 1350 miles. Why is the flying distance greater than that?

Lesson 2-7**Do Problems 1 & 2 Only****Reading the Lesson**

1. If E is between Y and S , which of the following statements are *always* true? *B, E*

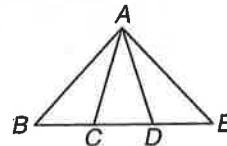

- A. $YS + ES = YE$
 B. $YS - ES = YE$
 C. $YE > ES$
 D. $YE \cdot ES = YS$
 E. $SE + EY = SY$.

2. Give the reason for each statement in the following two-column proof.

Given: C is the midpoint of \overline{BD} .

D is the midpoint of \overline{CE} .

Prove: $\overline{BD} \cong \overline{CE}$

**Statements**

1. C is the midpoint of \overline{BD} .
2. $BC = CD$
3. D is the midpoint of \overline{CE} .
4. $CD = DE$
5. $BC = DE$
6. $BC + CD = CD + DE$
7. $BC + CD = BD$
 $CD + DE = CE$
8. $BD = CE$
9. $\overline{BD} \cong \overline{CE}$

Helping You Remember

3. One way to keep the names of related postulates straight in your mind is to associate something in the name of the postulate with the content of the postulate. How can you use this idea to distinguish between the Ruler Postulate and the Segment Addition Postulate?

Skills Practice**Proving Segment Relationships**

Justify each statement with a property of equality, a property of congruence, or a postulate.

1. $QA = QA$ **REFLEXIVE**

2. If $\overline{AB} \cong \overline{BC}$ and $\overline{BC} \cong \overline{CE}$, then $\overline{AB} \cong \overline{CE}$.

Given **TRANSITIVE**
3. If Q is between P and R , then $PR = PQ + QR$.
Given **Add Post**
4. If $AB + BC = EF + FG$ and $AB + BC = AC$, then $EF + FG = AC$.
Given **Subst.**

Complete each proof.
